(54) LIQUID CRYSTAL DISPLAY DEVICE**(57)Abstract:**

PROBLEM TO BE SOLVED: To attain reduction of power consumption, acquisition of excellent picture quality and high preciseness of a circuit in a liquid crystal display device.

SOLUTION: In an unit pixel, a transistor 1 for selecting pixel, a scanning line 2 for selecting the transistor 1 and a signal line 3 supplying a signal for deciding the state of the pixel are respectively connected to a gate and a source. Gates of n-channel type transistor 4 and p-channel type transistor 5 provided with ferroelectric substances are connected to the drain in gate parts. Source sides of the n-channel type transistor 4 and the p-channel type transistor 5 are respectively connected to two wirings 7, 8 and drain sides are connected to each other to enable applying the voltage to a liquid crystal 6.

**LEGAL STATUS**

[Date of request for examination] 13.04.2001

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number] 3319561

[Date of registration] 21.06.2002

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's]

decision of rejection]

[Date of extinction of right]
